Ione, CA 95640

September 26, 2019 • 1 p.m.

How do you see the **FUTURE** of
BEEF PRODUCTION in
the *West?*

The industry seems abuzz about the direction of genetic improvement and if you ask a group of cattlemen to define beef cattle improvement, you'll likely get as many opinions as you will folks surveyed. For us, we see the future quite simple and the direction of our herd is clear.

- Produce the most pounds our environment will support.
- Optimize our total cowherd performance through consistency.
- Use sires of proven maternal lineages for predictable maternal performance and efficiency.
- Produce profitable, problem-free females that leave a lasting impact for generations.
- Use EPDs and Genomics as tools to compliment, not replace, phenotype and actual production in our genetic selection.

These goals have been developed by raising livestock alongside our customers and listening to YOU. Every time we talk to commercial cattlemen we are listening and developing a plan of what our genetics will look like in the future. Interestingly enough, it's mostly just a sound board because most commercial cattlemen and women are saying the exact thing we have been observing in our own operations and we have already made the move.
